

## Task 1: Self-Introduction Video

Create a **3-minute video** answering the following questions:

1. Where do you see yourself in the next 5 years?
2. What do you know about our organization?
3. What are your top 3 skills?
4. What two things would you never compromise and why?
5. What is something that you do naturally better than almost anyone else?

## Task 2: Contact Search Feature in Omnistudio

UI -

### Choose a contact

#### Search for a contact

First name	* Last name	Date of birth	Street address
<input type="text" value="e"/>	<input type="text" value="sharma"/>	<input type="text" value=""/>	<input type="text" value=""/>
Email address	Phone number	City	State Zip code
<input type="text" value=""/>	<input type="text" value=""/>	<input type="text" value=""/>	<input type="text" value=""/>
<input type="button" value="Search"/>			

	Name	DOB	Address	City	State	Zip	Email	Phone
<input type="checkbox"/>	Rajeev Sharma	1986-02-12	1001 NOBLE ST STE 1	FAIRBANKS	AK	99701	rajeevsharma@gmail.com	2582528582
<input type="checkbox"/>	Eesha Sharma	1995-07-04	4821 RIDGE TOP CIR	ANCHORAGE	AK	99508	eeshasharma@gmail.com

## Objective:

Develop a Contact Search feature using Omnistudio (Salesforce OmniStudio) to search for contacts from the Salesforce org. The functionality should include multiple search filters and display results in a table format. Upon selecting a contact, the Omniscript should be updated with the selected contact's data.

## Requirements:

### 1. Search Filters:

- Implement multiple fields for searching, including but not limited to:
  - First Name
  - Last Name
  - Date of Birth
  - Email Address

- Phone Number

## 2. **Search Results:**

- Display the search results in a table format that includes relevant details such as:
  - Name
  - Date of Birth
  - Address
  - City
  - State
  - Zip Code
  - Email Address
  - Phone Number
- Include pagination to handle large datasets.

## 3. **Single Contact Selection:**

- Allow for the single selection of a contact from the search results.
- On selecting a contact, automatically update the Omniscrypt with the contact's data, including:
  - Name
  - Email
  - Phone
  - Address (if applicable)

## 4. **Omnistudio Features:**

- Use out-of-the-box OmniStudio components (such as FlexCards, OmniScripts, and DataRaptors) to handle this task as much as possible.
- Avoid custom development and rely on standard features for search and data handling.

## 5. **User Interface:**

- The user should be able to easily input search criteria and view filtered results in a clear, concise manner.
- Results should be displayed in a structured table with options to view more details or select the contact for further action.

## **Deliverables:**

- A working Omniscrypt with the described contact search and selection functionality.
- Clear documentation or instructions for deploying and configuring the solution.
- A test plan with sample data and expected results to validate the functionality.
- Make a video of the flow and put in drive
